WARNING: seems you still have not added 'pyenv' to the load path.

Load pyenv automatically by appending
the following to
~/.bash_profile if it exists, otherwise ~/.profile (for login shells)
and ~/.bashrc (for interactive shells) :

export PYENV_ROOT="$HOME/.pyenv"
command -v pyenv >/dev/null || export PATH="$PYENV_ROOT/bin:$PATH"
eval "$(pyenv init -)"

Restart your shell for the changes to take effect.

Load pyenv-virtualenv automatically by adding
the following to ~/.bashrc:

eval "$(pyenv virtualenv-init -)"

These steps save a lot of time installing a lot of python code.

git log
commit 6615ca92711b8bfec24428529b02f6666ead44eb (HEAD -> master, origin/master, origin/HEAD)
Author: Ed Vidal Jr <develone@sbcglobal.net>
Date: Wed Oct 26 10:09:19 2022 -0600

    adding camera vlc and TensorFLow Lite image classify

commit 078614ef6ca15e14c8608f58b5ce701797e2af80

Author: Ed Vidal Jr <develone@sbcglobal.net>
Date: Wed Oct 26 09:01:53 2022 -0600

    new 64 bit pi400

commit 35f6add124a7fe0aac9fb65c697459f3b0dce72c
Author: Ed Vidal Jr <develone@sbcglobal.net>
Date: Tue Oct 25 10:44:12 2022 -0600

    additional tests

commit f4b4834fb04e78d8cdda68075eb286c9d854c9e4
Author: Ed Vidal Jr <develone@sbcglobal.net>
Date: Mon Oct 24 18:18:59 2022 -0600

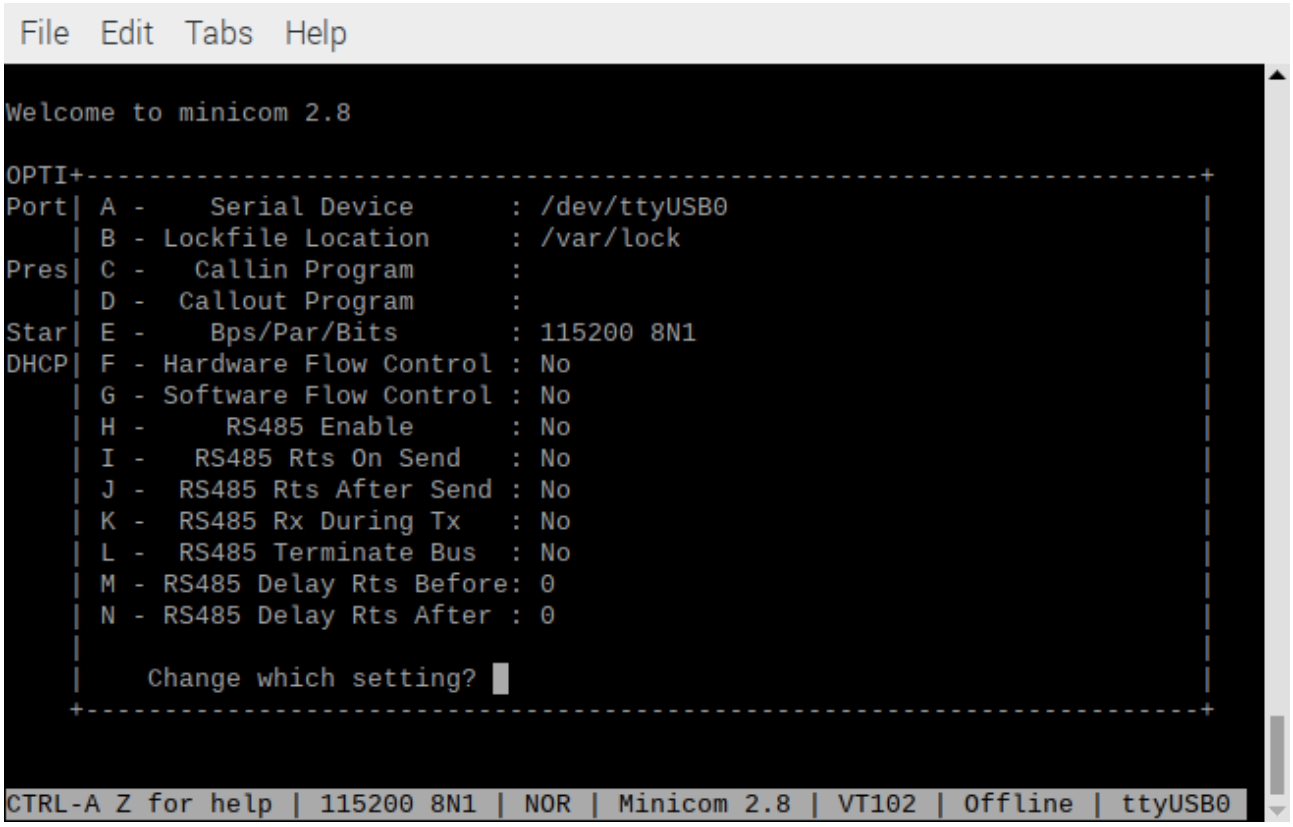
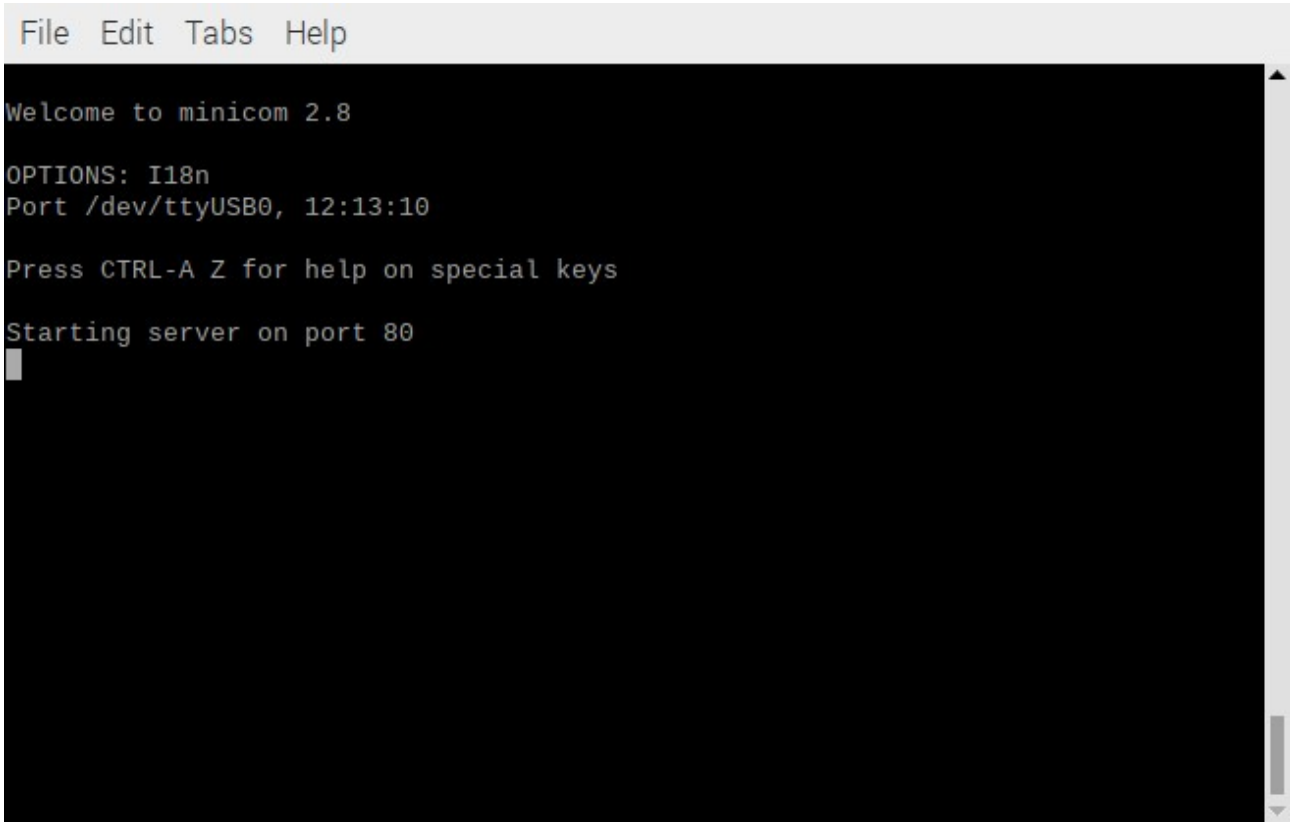
make

programmed a pico_w wtth the file /home/devel/pi4-28/pico-examples/build/pico_w/access_point/picow_access_point_poll.uf2

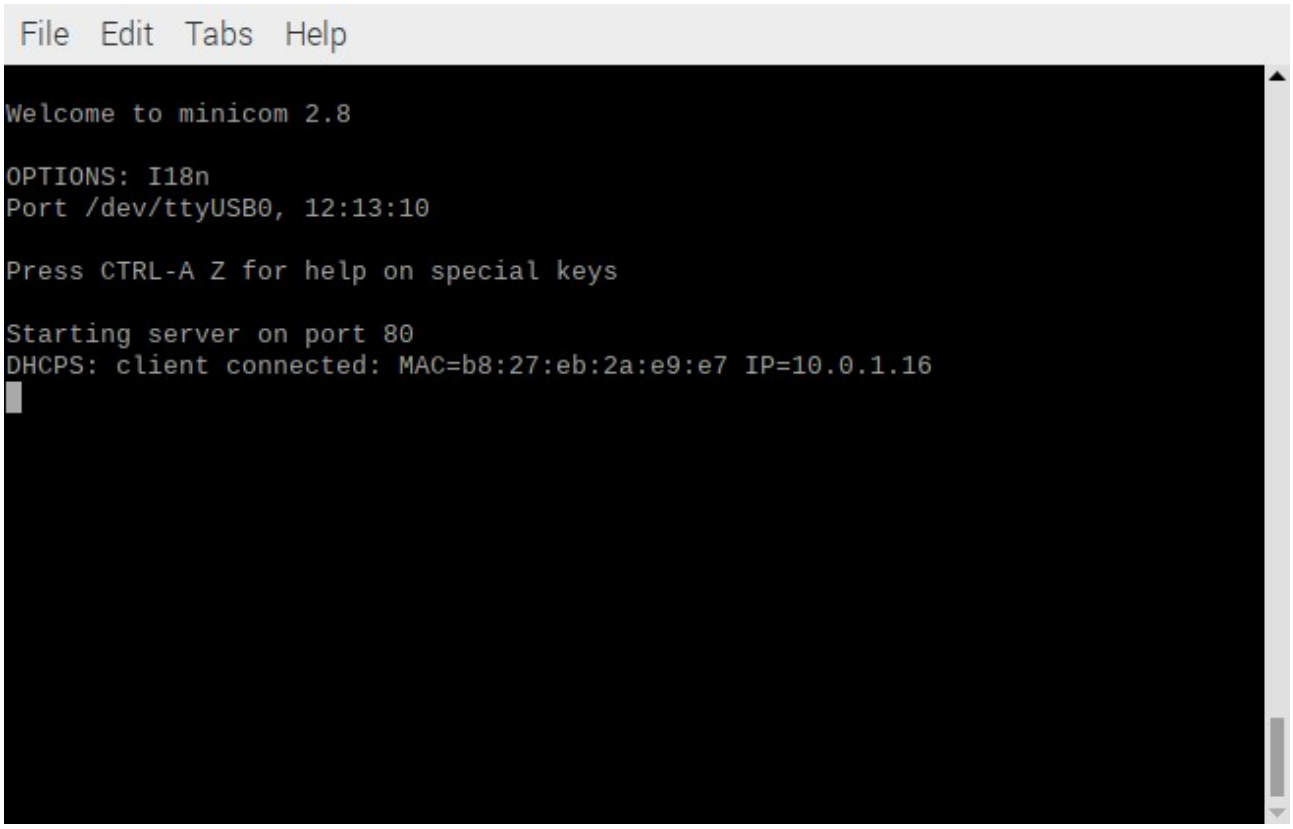
minicom myusb0
This setup on /dev/ttyUSB0



xx



This is when the remote pi3-11 is powered up



cd pi4-35

This is for creating the 2nd pico_w solftware.

rsync -avl ../pi4-28/pico-examples .

cd pico-examples

rm -rf build

mkdir build

cd build

cmake -DPICO_BOARD=pico_w -DTEST_TCP_SERVER_IP="10.0.1.14" -DWIFI_SSID="nanotest" -DWIFI_PASSWORD="12345678" ..

make

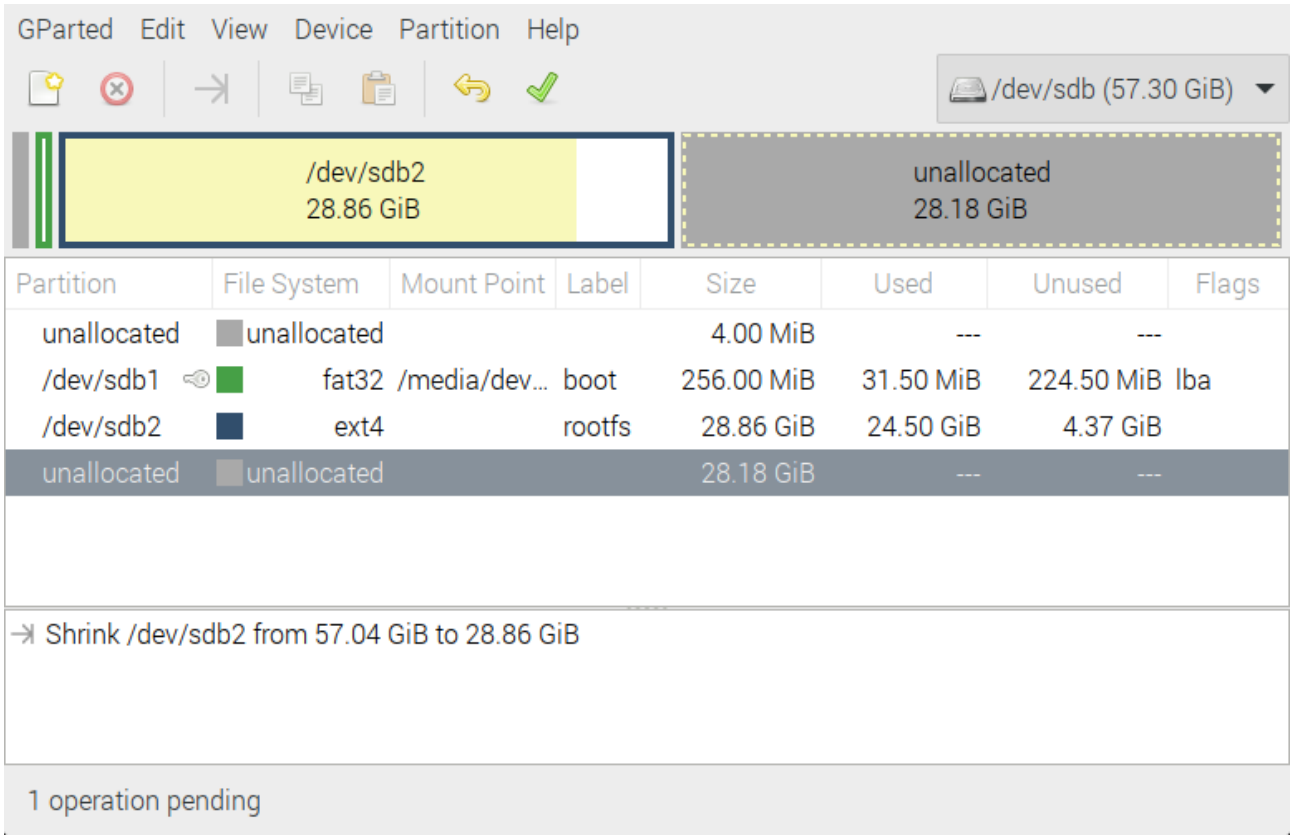
making a backup of the system

Mount the 64 Gb USB on another system.

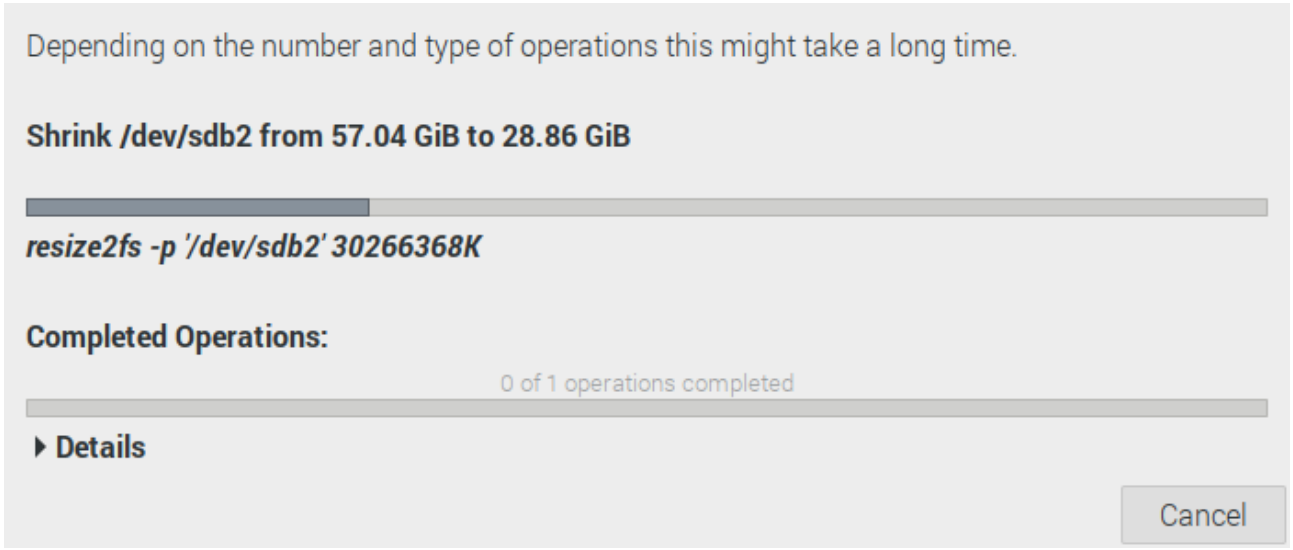
As root use gparted

UN-mount the 2nd partition

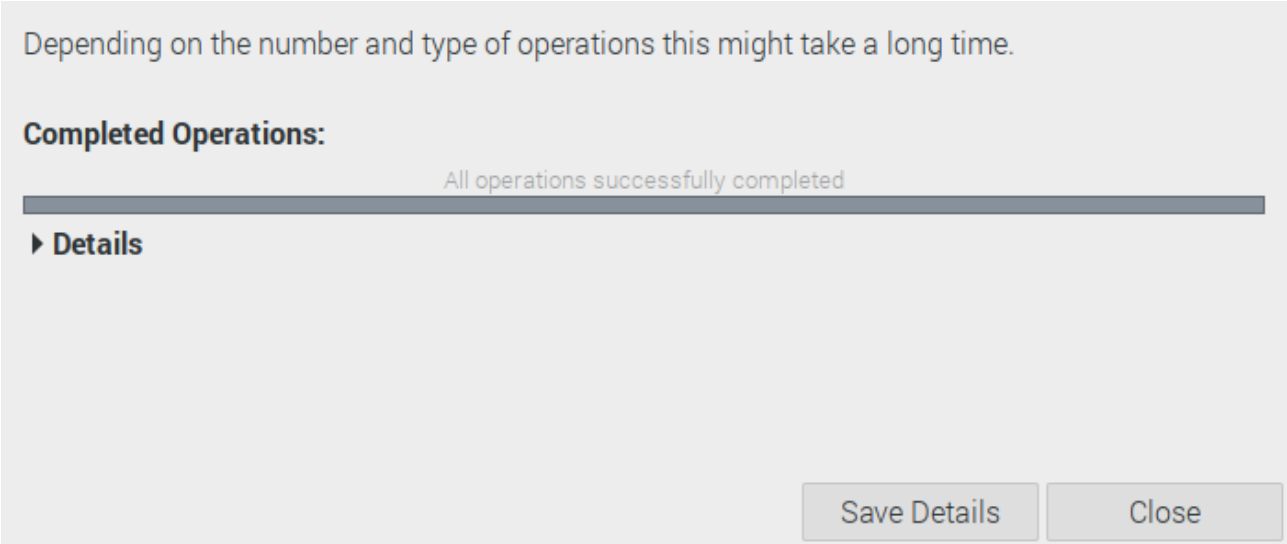
first you shrink the partition



As the partition is being shrieked.



results are successful



root@pi4-27:/media/devel/1b763776-4e1d-499c-9f24-a116a58c161f#
